EXP-5: Design a wireframe for a mobile application that incorporates localization features using Figma

1. Aim

To design a mobile application wireframe using Figma that incorporates localization features such as current location detection, nearby place search, map navigation, directions, and language preferences.

2. Software Used

- Figma: To design mobile wireframes and create navigation links between screens.
- Web Browser: To access Figma and preview the design.

3. Algorithm

- Start.
- Open Figma and create a new design file.
- Create five mobile screens: Welcome, Home, Map and Nearby Places, Place Details and Directions, and Profile and Settings.
- Design the Welcome screen with an app logo and Get Started button.
- Design the Home screen with a location display, search bar, and nearby places.
- Create a Map screen with location markers and nearby destinations.
- Design the Place Details screen with address, distance, and directions.
- Create the Profile and Settings screen with language, region, and location permission options.
- Connect the screens using arrows and interactive links in Prototype mode.
- Preview the navigation flow and verify the connections.
- End.

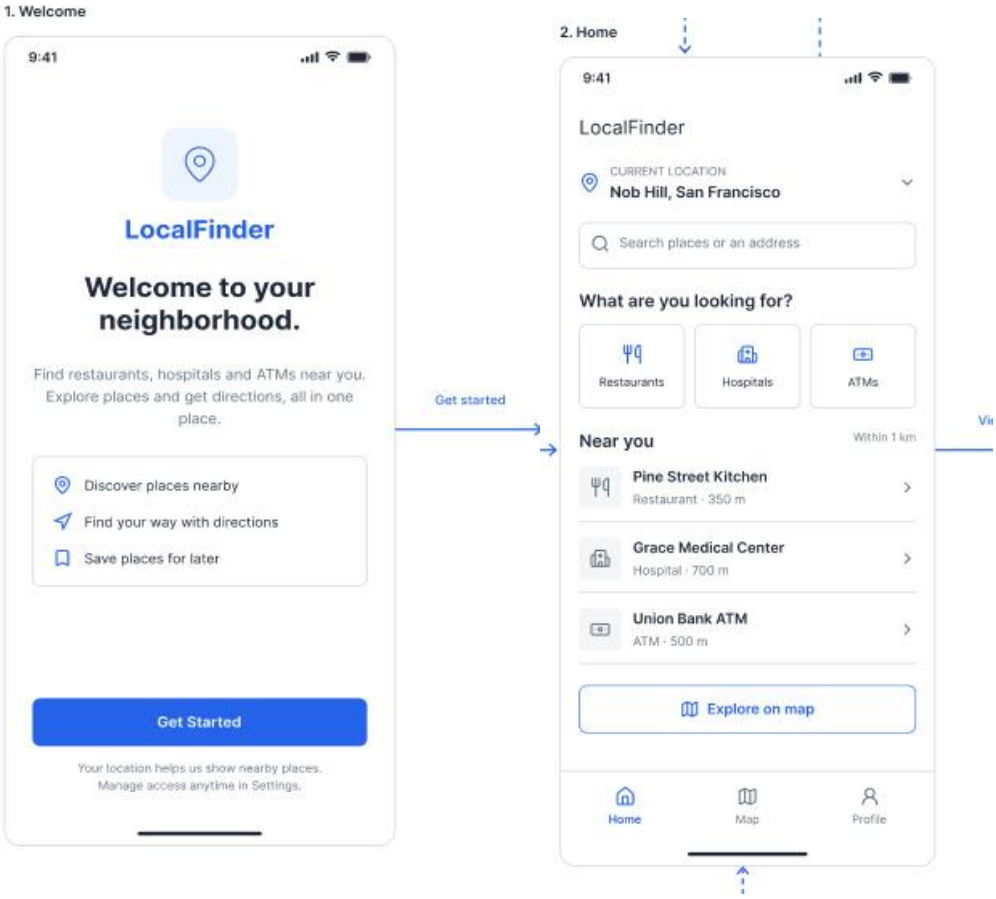

4. Design

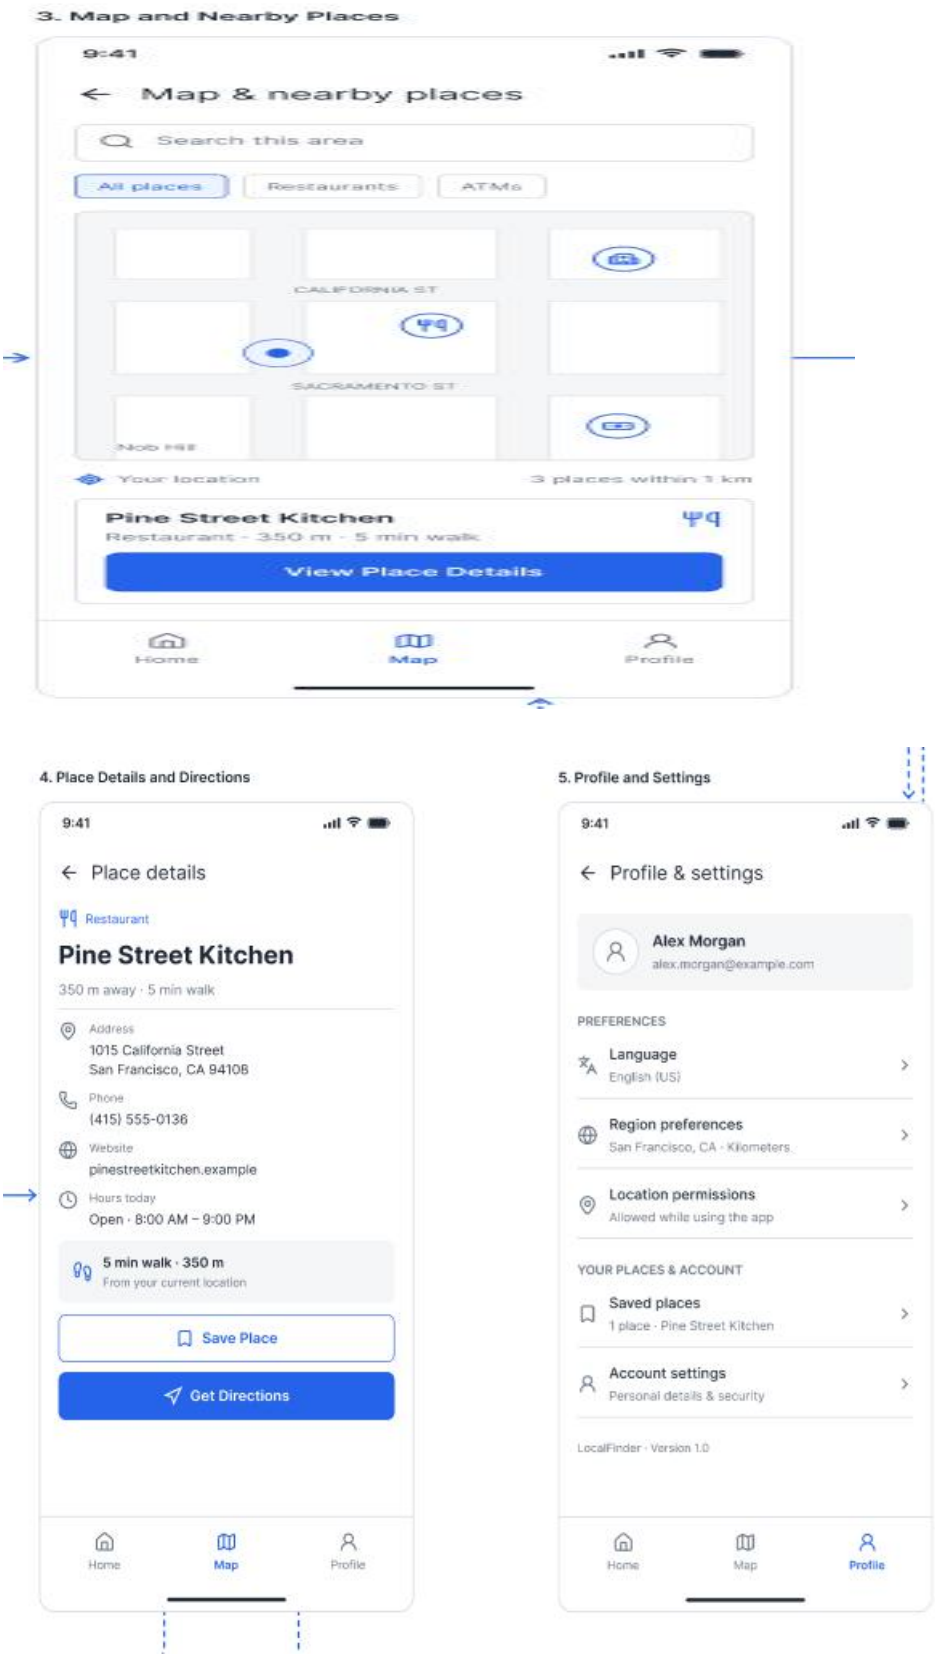

The wireframe uses a simple, consistent layout with a white background, blue accents, gray borders, and recognizable icons.

Screen	Main components
1. Welcome	App logo, introduction, Get Started button
2. Home	Current location, search bar, nearby places

3. Map and Nearby Places	Map, location marker, nearby destinations
4. Place Details and Directions	Place name, address, distance, Save and Directions buttons
5. Profile and Settings	Language selection, region, saved places, location permissions

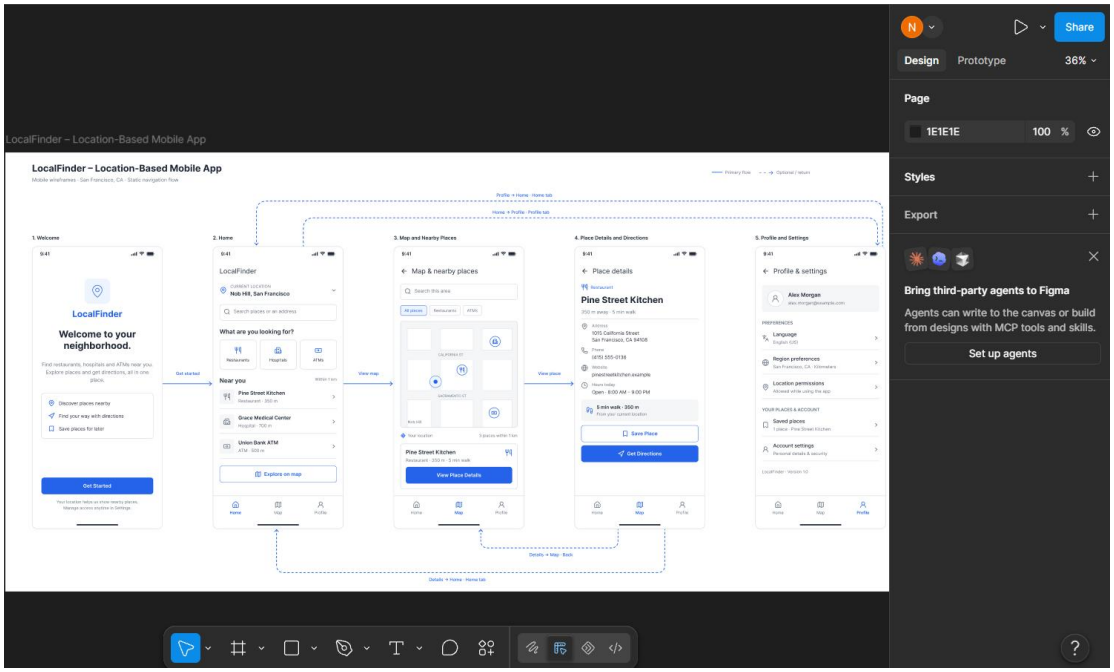

The navigation flow connects Welcome to Home, Home to Map and Profile, and Map to Place Details. Back navigation allows users to return to previous screens.

5. Prototype

The prototype contains five mobile screens arranged on a single canvas, with blue arrows showing navigation between the screens. Interactive connections can be configured using Figma's Prototype mode.

Result:

Thus, a five-screen mobile application wireframe incorporating localization features was designed using Figma. The prototype demonstrates location detection, nearby place search, map navigation, place details, and profile settings, with navigation links connecting the screens.
