# EXP-1:

**Use Figma to create an interactive diagram illustrating the components of a basic cellular system.**

**1. Aim:**

To create an interactive diagram using Figma that illustrates the major components of a basic cellular communication system and explains how they communicate with each other.

**2. Software Used:**

Figma – for designing the diagram and creating interactive prototypes.Web Browser – to access and use Figma.

**3. Algorithm:**

- Open Figma and create a new design file.
- Create a frame and add a suitable title.
- Draw shapes representing the Mobile Station, Base Transceiver Station (BTS),
- Base Station Controller (BSC), Mobile Switching Centre (MSC), and Public
- Telephone Network.
- Connect the components using arrows to show the direction of communication.
- Add labels and brief descriptions for each component.
- Create prototype interactions by connecting components or buttons to relevant
- frames.
- Preview the prototype and test the interactions.
- Save the design and verify that all components and links work correctly.

**4. Design**

The design consists of the following components of a basic cellular communication system:

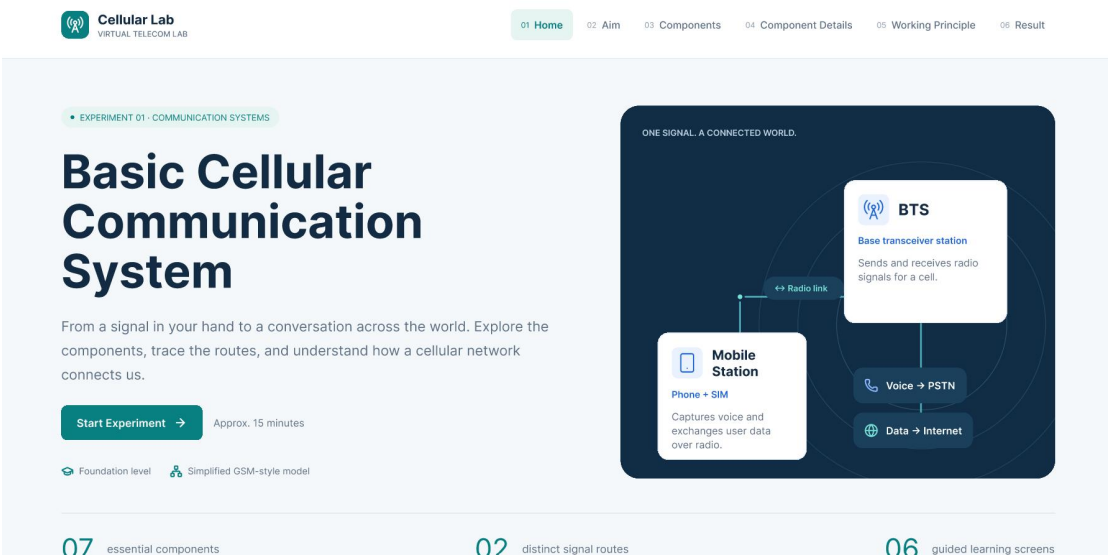

- **Mobile Station (MS):** Used by the subscriber to make and receive calls.
- **Base Transceiver Station (BTS):** Transmits and receives radio signals between mobile devices and the network.
- **Base Station Controller (BSC):** Controls multiple BTSs and manages radio resources.

- **Mobile Switching Centre (MSC):** Routes calls and manages connections between mobile users and other networks.
- **Public Switched Telephone Network (PSTN):** Connects cellular users to external telephone networks.

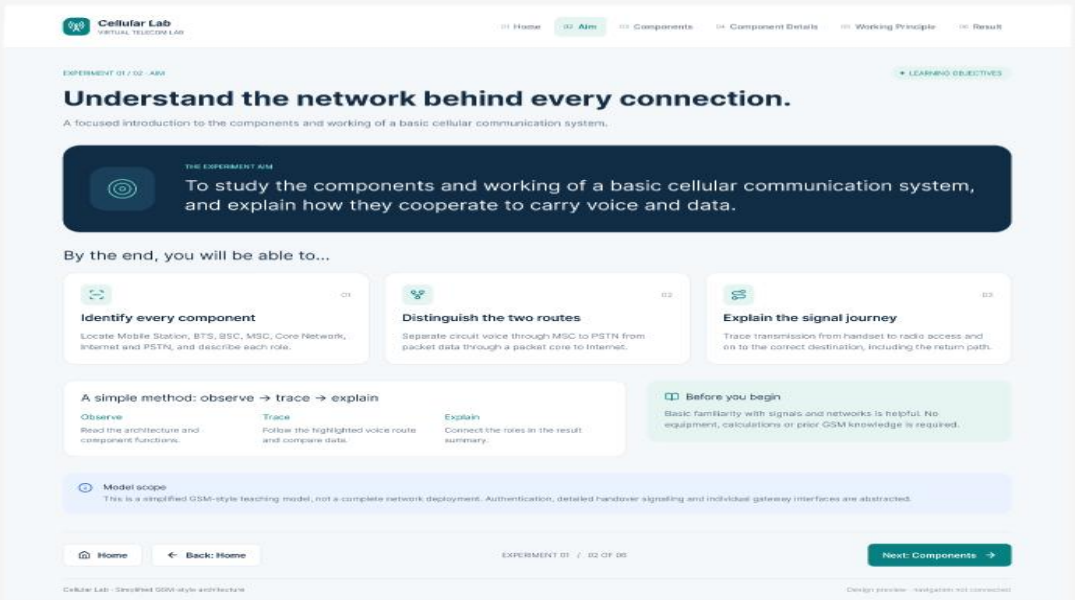

The components are arranged in a logical sequence and connected using arrows to represent the communication flow. Labels and brief descriptions are included to explain the function of each component.

## 5. Prototype

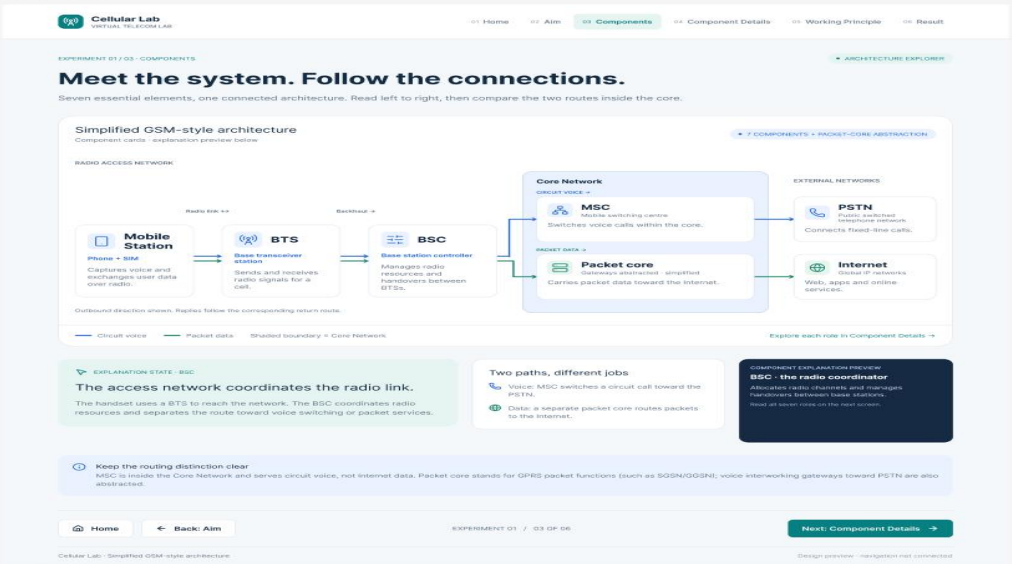

- Open the Prototype tab in Figma.
- Select each component and create a connection to its corresponding information frame.
- Set the interaction trigger to On click.
- Choose Navigate to to display the relevant frame.
- Repeat the process for all components.
- Click Present to run the prototype.
- Test each interaction to verify that the component descriptions are displayed correctly.

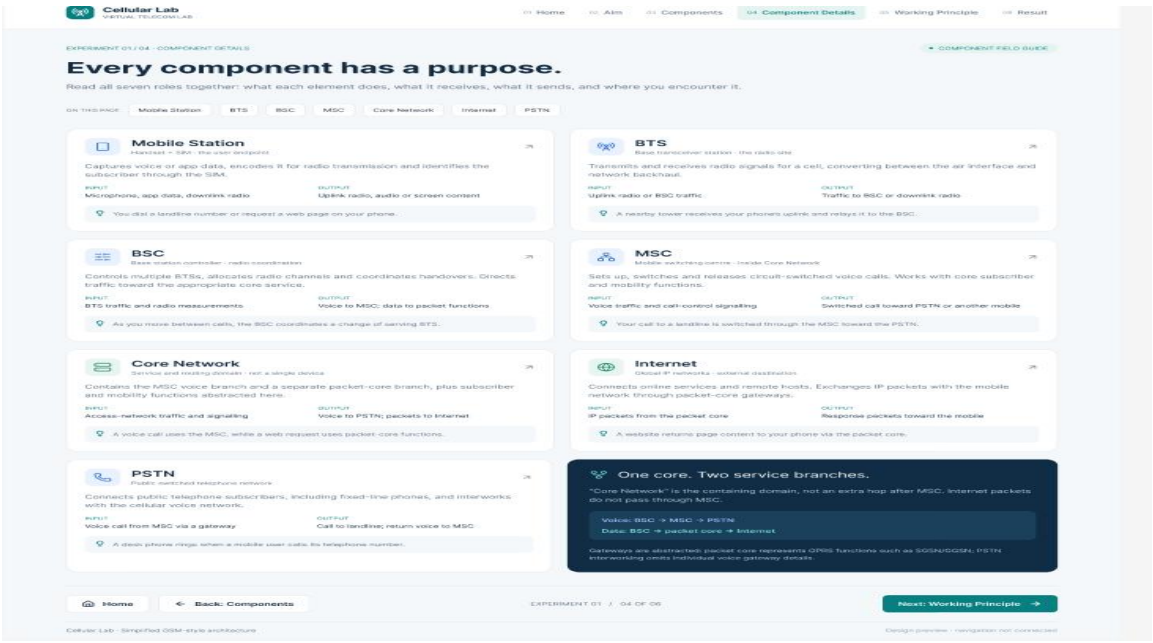

Aim

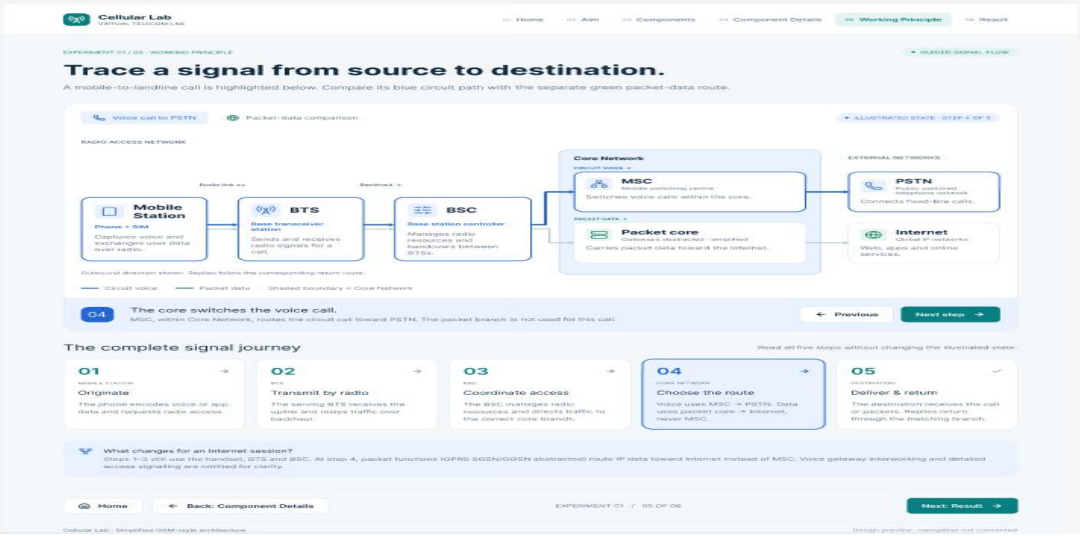

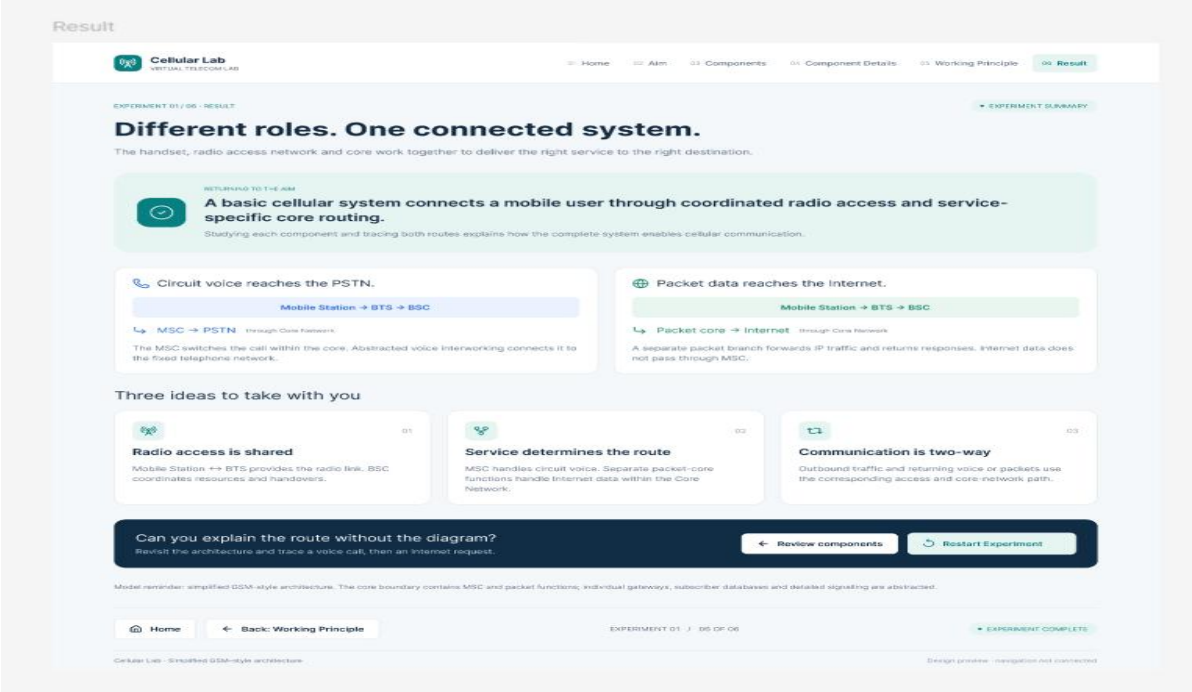

Components

Working Principle

## 6. Result

An interactive diagram illustrating the components of a basic cellular communication system was designed using Figma. The prototype demonstrates the functions of the major components and their relationships in cellular communication.
